

PR: Schmidt & Heinzmann - composite manufacturer located in Bruchsal, Germany, opens new production hall and technology lab

Bruchsal: Schmidt & Heinzmann opened its newly built production hall including the technology lab on 08th March 2019. On an area of more than 2.000 m² the extension includes in addition to production and office space also an own technology lab. From now on processes for bonding, preforming and fiber application can be constantly tested and further developed. Due to the limited space and machinery this was only possible in the past if customer machines were under construction.

"As a global leader in production machinery and automation solutions for the the composite industry, we need to continuously extend our technological advantage. Therefore, the setting up of a technology lab was the next logical step after our expansion into the USA and China" says managing director Matthias Feil. "From now on, we can realize joint developments with our customers permanently."

The opening was celebrated together with customers, employees, members of the district council and mayor Mrs. Petzold-Schick. On a company tour, visitors were informed at various stations about the product and service portfolio as well as the possibilities offered by the new technology lab. In addition, there was the possibility to virtually experience the integration of a new machine into a customers' factory.

Thomas Geiß (Managing board Sparkasse Kraichgau), the mayor of Bruchsal, Ms. Petzold-Schick, Gerhard Rottweiler (former Managing Director Schmidt & Heinzmann) and Managing Director Matthias Feil inaugurate the Technology Lab.
